The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      unsure
                                                                                                                              source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neighboring sequence information:
This entry is part of a larger genomic contig. The start of this sequence is directed towards the centromere. The end (3181.88 . 320187) of this sequence overlaps with the start of Acc_number AF049895. It covers RGP-64M4, SCb-282k6, SCb-273G1 entirely and is overlapped by SCb-296N11, SCb-316M22.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                            Dye;
                                                                                                                                                                                                                                                                                                                     Sequencing vector: Mismpl8, 100% of reads Sequencing vector: Mismpl8, 100% of reads Consensus quality: 319496 bases at least Q40 Consensus quality: 320184 bases at least Q30 Consensus quality: 320187 bases at least Q20 Quality coverage: 7.63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /mol_type="genomic_DNA"

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                  Web site: http://www-seq.wi.mit.edu

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukocytes, spleen, kidney, testis, prostate, pancreas and lymph node.

SIMILARITY: Belongs to the Ser/Thr family of protein kinases. SIMILARITY: Contains 1 CARD domain. PTM: Autophosphorylated +++

Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

Claim 6; Page; 93pp; English.

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of this apportosis protein apoptosis induced by caspase-8 and capase-10 during CD95 signalling apoptosis induced by caspase-8 and capase-10 apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compositions which will modulate the interactions of the various compositions identified. RRC, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Overexpression of RRC in an in vitro cell system can be used to creening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of RRC in an in vitro cell system can be used to condentify inhibitors of the enzymatic activity of caspase-8.

CC apoptosis. Overexpression of ARC in an in vitro cell gath in muscle tissue to identify inhibitors of the enzymatic activity of caspase-8.

CC apoptosis. Overexpression of ARC in an in vitro cell gath in muscle tissue can cardiac disease with increased cell dath in muscle tissue and cardiac disease with increased cell dath in muscle tissue can be used as reagents for the preparation of EIDES can be used to treat e.g. cancer, AIDS, neurodegenrative disease. AntiRICK antibodies con be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK blood and intracellular apoptosis factors are potential drug candidates. This sequence was created using information given in the specification

ö
media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                           125

The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Annael protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling. The invention provides methods for identifying compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug careening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography

disease associated with excess cell growth and dysregulation of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug cremening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8.

Cleantification of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplactic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and RADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis gaptosis, inhibitors of RICK binding to intracellular apoptosis appears to the preparation or an entire contraction with an example of an entire contract of an essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis appears to the appearation or an entire contraction with a process of an essential for apoptosis, inhibitors of RICK binding to intracellular appearance of apoptosis is needed.
compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   424

                                               New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
                                                                                                                                                              can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1.
Conditions such as ALDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                373

human phosphorylation effectors useful for the diagnosis, treatment prevention of proliferative, immune and neuronal disorders. New and

Claim 1; Page 84-85; 142pp; English.

AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.

Sequence 540 AA;

830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.

WPI; 2001-524255/58. N-PSDB; AAK94554.

Claim 8; SEQ ID NO 3454; 1380pp + Sequence Listing; English.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length not form DNA of the invention. Note: The sequence data for this patent did format directly from BPO

The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its despression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        66 SRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQP 125

The method of the invention comprises contacting a test compound with at least one of the invention comprises contacting a test activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAC77607 to AAC78448 encode the human cancer associated proteins given in ABB43398 to AAB4429. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidabetic; antisthmatic; antithratic; antidabetic; antisthmatic; antithratic; antibacterial; antivarial; dermatological; neuroprotective; cardiant, thrombolytic; coagulant; correspic; vasotropic; antipsoriatic and antiangiogenic. The nootropic; vasotropic; antipsoriatic and antiangiogenic. The present invention may be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colynucleotides, polypeptides can be used for preventing, treating or the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and apacted and antagonists and bacterial or viral inflections. The present inclease, and antagonists and bacterial or viral inflections, and or used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of

                                                                                                                                                                    The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the polynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy procedures. The current sequence is that of the human KPP protein of the

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of the apoptosis induced by caspase-8 and caspase-10 during CD95 signalling apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of capptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overspressision of ARC in an in vitro cell system can be used to confidentify inhibitors of the enzymatic activity of caspase-8.

Confidentify inhibitors for the propersions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic ansemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibobitor of an essential step in the biochemistry of apoptosis is needed. RICK inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to the essential for apoptosis, inhibitors of RICK bioding to intracellular apoptosis factors are potential draw appearation of the sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial article for the invention are involved in the regulation of caspase activation. The caspase cretuitment domain (CARD) polynucleotides, polypeptides, homologues and article and be used in screening assays, detection assays, predictive medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The death, abnormal activity of the TMF receptor complex, abnormal activity of a caspase. The passases that may be treated include cancer (particularly follicular activity of the TMF receptor complex, or abnormal activity of a caspase. Diseases that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with mutations in p53 and hormonedependent tumours), autoimmune disorders (e.g. systemic lupus associated with mutations in p53 and hormonedependent tumours), autoimmune disorders (e.g. systemic lateral sclerosis, articlitis pigmentosa, parkinson's disease, mayoricophic lateral sclerosis, retuinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke.

CARD-3 protein interacts with other cellular proteins, and stroke.

CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and express a long transcript that encodes CARD-4 sor two CARD-4 spice variants, CARD-47 and CARD-42. This sequence compounds which modulate their activity. The CARD-4 and CARD-42. This sequence compounds which the human CARD-43 protein described in the method of the invention

The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated cDNA clone (see AAR30001). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Ras/APO-1 receptor complex, abnormal activity of the raspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-6 or CARD-6

                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to identifying (M1) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (Iong form) polypeptide with a by contracting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polyperide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the IRR (leucine rich repeat) domain of CARD-4. Also included is a method of
                                                                                                            164

cc identifying a candidate compound for modulating LPS (lipopolysaccharide) mediated activation of nuclear factor-kappa B (NF-kB), by providing a cell expressing the LNR domain of CARD-4 and harbouring LPS, exposing the cell to a test compound and measuring NF-kB activation, where altered NF-kB activation polypeptide in the presence of the test compound indicates that the test compound is a candidate compound for compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by (M1) are useful for treating a disorder characterised by aberrant CARD-4 protein or nucleic acid. Compounds that modulate the activity of CARD-4 protein or nucleic acid. Compounds that modulate the activity of CARD-4 core useful to treat or diagnose disorders such as cancer, viral infections, autoimmune disorders e.g. systemic lupus erythematosus, immune—mediated glomerulonephritis and arthritis, immune disorders, such as multiple sclerosis, Hashimoto's thyroiditis, atopic conditions such as altergies, insulin-dependent diabetes, bacterial infections, including tuberculosis, and lepromatous leprosy, disorders of contact dermatifial infections, including tuberculosis, hashimoto's thyroiditis of the contact dermaticial infections, including tuberculosis, hashimoto's thyroiders of the contact dermaticial infections, including tuberculosis, hashimoto's thoreard dermaticial infections and lepromatous leprosy, disorders of conditions including and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    472

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and commone-dependent tumours such as breast cancer, prostate cancer, and covarian cancer), autoimmune-mediated glomerulonephritis), viral infections stythematosus, immune-mediated glomerulonephritis), viral infections (such as those caused by herpes viruses, poxytrones, and adenoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention
                                                                              Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.
                                                                                                                                                                                             Example 2; Fig 2; 116pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 27, Application US/09069023A

Sequence 27, Application US/09069023A

Patent No. 6148573

GAPELICANT: Nunez, Gabriel

APPLICANT: Inchara, Nachiro

APPLICANT: Inchara, Nachiro

APPLICANT: Esceki, Takeyoshi

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS

TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS

TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS

CURRENT APPLICATION NUMBER: US/09/069,023A

CURRENT FILING DATE: 1998-04-27

NUMBER OF SEQ ID NOS: 38

SOFTWARE: PatentIn Ver. 2.0
